

Tissue Culture/ Micropropagated PAPAYA 'DAWN DELIGHT'

'Dawn Delight': Exclusively tissue culture propagated female papaya genotype
Relatively short plants suitable for high density orchards under open field

Plants come to flowering in 4-6 months
First harvest 4 months after flowering (8-10 months from field planting)

Fruits of about 1 Kg, red flesh and TSS 12-14 B
Generally seedless in pure crop of TC plants; seeds may form with pollen source

TC plants are supplied exclusively in company labeled polybags
